Reliable Temperature Monitoring Solutions

Dimens' temperature data loggers provide accurate and reliable temperature monitoring for various applications, ensuring product quality and safety. Their user-friendly design and diverse features make them a valuable tool for optimizing temperature control and preventing costly losses.

Tempmate® GS2 Data Logger

Tempmate GS2 is a temperature, humidity, and light data logger that offers a variety of features to help you monitor your valuable shipments. It ensures the safety of your shipments with real-time alarms, user management, and global connectivity.

Tempmate®-S1V2

This single-use temperature data logger simplifies cold chain monitoring. Pre-programmed and ready to use, it provides instant alarm feedback and automatic reports. Ensure the safety of your goods with this reliable and cost-effective solution.

Tempmate® S2 Datalogger

This single-use data logger provides instant temperature and humidity readings on a built-in display. Easy to use with no software required, the Tempmate® S2 is perfect for monitoring sensitive goods on the go. Get accurate data and peace of mind with this compact and reliable device.

Tempmate®-GM2

This rechargeable data logger provides real-time temperature, humidity, and location monitoring. Optimize your supply chain with automated cloud uploads and local data storage. Durable and long-lasting for continuous use.

Tempmate®-M2

This multi-use temperature and humidity data logger offers high accuracy and versatility. It features a user-replaceable battery, external probe options for extended temperature ranges, and an on-board configurator for easy setup. Generate detailed PDF and CSV reports with this reliable and reusable device.

Tempmate®-B

This rugged, miniature data logger is built for extreme environments with its stainless steel casing and long-lasting battery. Easy to use and highly accurate, the tempmate®-B is ideal for a wide range of applications.
